Spotted Dashboards: Build Steps

Website dashboards (spotted.ae) + QR scanning in the app · restaurant, shop, influencer, Spotted staff · step by step, like you're 5 · 31 Oct 2026

Where: the **dashboards live only on the website** (repository **Spotted-website**). **QR scanning happens only in the Spotted app** (repository **Spotted**). Both are in **claude.ai/code**. It uses **example data** and stays **switched OFF** until restaurants join. It replaces "Step 8" in your Website Build Guide.
Before you start: Steps 0–7 of the Website Build Guide must be done, especially **Step 7 (Supabase)**.

The rules (Step 1 saves these into your project)

Topic	Decision
Where	Dashboards **only on the website** (phone/iPad browsers can view). **QR scanning only in the Spotted app**, in a staff mode
Scanning (app)	Staff log in to the **Spotted app** with their staff login → **Scan**. They **scan the customer's Spotted QR**, type the **bill amount**, tick **coupon used** and **recommended item bought**. That one step = visit + Pins + influencer credit + stars
Restaurant staff	Every staff member has **their own login**. **1 Head** (sees everything, adds/removes staff) + **sub-staff** (scanning in the app only, no money, no website dashboard). Every scan records who did it
Staff logins per plan	Starter 7 · Grow 10 · Main 15 · Premium unlimited · Multi-branch unlimited · Shops: Starter 7 · Plus 10 · Pro unlimited
Look	Glass cards over the partner's own **blurred photo** (default: blurred purple night street) · left round-icon menu · "Ask me anything" → WhatsApp · purple/lilac bars, yellow highlight, green only for growth and green stars · **light and dark** with the pull-string lamp · logo or initials, no faces · staff screens plain and fast
Every number	Shown as a **graph** and as a **table (sheet)**, with a switch. **No heatmaps**
Compare	Week / month / year, each vs the previous one, with % up or down
Downloads	**Excel** (all numbers) + **PDF** monthly report
Weekly email	Free summary every Monday, e.g. "42 visits, +12%"
Loyalty return	"Came back because of loyalty" = returned **within 60 days** after getting a stamp
Privacy	Restaurants see **counts only**, never customer names or phones. Influencers see **no customer info**
Influencer money	Only a **range** of what their reels brought in (e.g. AED 2,000–2,500, rounded to 500). **Never the real bill**
Confidentiality	Spotted never reveals what one restaurant earns. A clause in the partner terms now, a lawyer agreement later

Spotted staff	Separate admin login. **Head** = everything incl. money · **Staff** = counts only. **2-step login** + log of who viewed what

What each dashboard shows

Restaurant / shop (Head login)

Card	Shows
Saves & reels	People who saved reels about you · how many influencers made reels
Visits	Per week and month · busiest days · busiest times
Stars	Yellow (saved) · purple (visited, no purchase) · green (bought)
Influencers	Visits each influencer brought · note "one guest can count for more than one influencer"
Coupons	Per coupon: times used · money customers saved · money it brought in
Loyalty	Repeat visitors · loyalty card sign-ups · came back because of loyalty (60 days)
Also	Journey bar (saved → reminded → visited → bought) · offers manager · media manager · reviews · branch switcher · QR poster · preview · plan & billing · staff manager · "Ask me anything" → WhatsApp

Influencer (Insider)

Card	Shows
Reels	Reels per month · saves per reel · **top reel** by saves and visits
Results	People who went · people who bought the items you recommended
Money	**Range only**, per week / month / year
Profile	Spotted followers · yellow and green stars · "check your prices" prompt

Step 1 · Save the rules

COPY INTO CLAUDE CODE

Read SITE_RULES.md. I'm attaching my PDF "Spotted_Dashboards_Build_Steps". Add its rules table and the two "what each dashboard shows" tables to SITE_RULES.md under "Dashboards (31 Oct 2026)". Everything in this PDF is built with clearly labelled EXAMPLE data and switched OFF in src/config/features.ts (switches: dashboards, adminArea). No code yet. Commit.

To attach: click the **paperclip** in Claude Code and pick this PDF.

Step 2 · Logins and roles (Supabase)

COPY INTO CLAUDE CODE

Set up roles in Supabase with row-level security:
- partner_head: one per restaurant/shop; sees all its data incl. money; can add/remove staff.
- partner_staff: belongs to one restaurant/shop; can only scan in the Spotted app; no website dashboard; sees no money.
- influencer: sees only their own reels and results; money only as a range.
- spotted_head and spotted_staff: admin area; spotted_staff sees counts only, no money.

Staff logins per plan: Starter 7, Grow 10, Main 15, Premium and Multi-branch unlimited; shops Starter 3, Plus 5, Pro unlimited. Block adding staff past the limit with a friendly "Upgrade your plan" message. Logins use email + one-time code (free). The app and website share these logins. Add tests that each role can't see what it shouldn't. Commit.

✓ Ask it: "Show me a test proving staff can't see money and restaurant A can't see restaurant B." It should say the tests pass.

Step 3 · QR scanning in the app (Spotted repository)

Open **claude.ai/code**, choose the **Spotted** app repository (not the website), and paste:

COPY INTO CLAUDE CODE

Behind features.pins (OFF), add two things that share the website's Supabase project:
1. Customer side: "My Spotted QR" in Profile. A QR that changes every day and identifies the user to partners without showing their name.
2. Staff side: if a partner_staff or partner_head logs in to the app, show a plain, fast "Scan" screen (big buttons, no fancy background):
   a) "Scan customer QR" opens the camera.
   b) "Customer verified" (no name). Type the bill amount (AED, number keypad).
   c) Tick: coupon used (pick which, or none), recommended item bought (yes/no).
   d) "Save visit" shows: star (purple if bill is 0, green if more), Pins earned (1 per AED 15, leftover carries over), influencer credited.

Rules: one scan per customer per place per day; save which staff member scanned; works offline by queuing and sending later. Big buttons (at least 56 pt). Run npm run check, commit, and tell me how to test with two phones.

✓ Test: phone 1 logged in as a normal user shows "My Spotted QR"; phone 2 logged in as staff scans it and saves a visit. The visit then shows on the website dashboard.

Step 4 · The look + graph and sheet for everything

COPY INTO CLAUDE CODE

Dashboard look (match the draft "Spotted Dashboard Draft" I showed you): glass cards (see-through, blurred) over the partner's own uploaded photo, blurred; if none, a blurred purple night-street background with warm lights, no people. Left column of round icon buttons (Home, Visits, Offers, Staff, Reports). Top: page title, logo or initials circle with name and role, and the pull-string lamp for light/dark (hover shows a bulb, click switches theme, string springs back). A wide "Need help? Just ask me anything" bar: typing + "Send on WhatsApp" opens wa.me/971508733160 with the message filled in. Colours: purple and lilac bars, yellow for the top value, green only for growth arrows and green stars.
Then make one reusable "StatCard" used on every dashboard: a title, a big number, % change vs the previous period (green up / red down, with the words "up" or "down"), and a switch "Graph | Sheet". Graph = line or bar chart; Sheet = a simple table of the same numbers. Period buttons on top of each dashboard: Week, Month, Year, and Compare (shows this period vs the previous one). No heatmaps. Commit.

Step 5 · Restaurant / shop dashboard

COPY INTO CLAUDE CODE

Update /dashboard/business (Head login) using StatCard for every number:
- Saves of reels about this place; number of influencers who made reels.
- Visits per week and month; busiest days; busiest times of day.
- Stars: yellow, purple, green.
- Visits each influencer brought (note: "One guest can count for more than one influencer").
- Coupons: per coupon, times used, money customers saved, money it brought in.
- Loyalty: repeat visitors (more than once), loyalty card sign-ups, came back because of loyalty (within 60 days of a stamp).

Keep the existing cards (journey bar, offers, media, reviews, branches, QR poster, preview, plan & billing, notifications, Ask me anything → WhatsApp). Add "Staff": list, add, remove staff within the plan limit; see who scanned what (scans come from the app). Show counts only, never customer names. Sub-staff cannot log in to the website: show "Staff use the Spotted app to scan". Commit.

Step 6 · Influencer dashboard

COPY INTO CLAUDE CODE

Update /dashboard/creator using StatCard:
- Reels per month; saves per reel; top reel by saves and visits.
- People who visited; people who bought the items they recommended.
- Money their reels brought in: ONLY a range rounded to AED 500 (e.g. "AED 2,000–2,500") per week, month, year. Never show exact bills or a restaurant's totals.
- Spotted followers, yellow and green stars, "Check your prices" prompt.

No customer information at all. Commit.

Step 7 · Downloads and weekly email

COPY INTO CLAUDE CODE

Add on both dashboards: "Download Excel" (all numbers for the chosen period, one sheet per card) and "Download PDF report" (the month on 2-3 pages in brand colours). Influencer files show money as ranges only. Then add a free weekly email every Monday 9 am UAE time using Supabase + Resend free plan: "This week: N visits (+X%), N saves, best offer: …". Each email has an unsubscribe link. Tell me what accounts I need to make, step by step. Commit.

Step 8 · Spotted admin area (for you)

COPY INTO CLAUDE CODE

Build /admin with a separate login and 2-step login (email code + authenticator app):
- spotted_head: sees every restaurant, shop and influencer dashboard, all money, can add/remove Spotted staff, can switch features on/off.
- spotted_staff: same pages but money is hidden.
- An activity log: who looked at which dashboard and when.
- An overview page: total partners, total visits, total saves, plans by type, trials ending soon.
Example data, OFF in features.ts. Commit.

Step 9 · Partner terms (confidentiality)

COPY INTO CLAUDE CODE

Write a plain-English /partner-terms page covering: 2 months free then prepaid plans; staff login limits per plan; we never share one partner's sales with other partners or influencers; influencers only see estimated ranges; customers stay anonymous; data is deleted on request. Add a checkbox "I agree to the partner terms" to partner sign-up. Mark the page "Draft, to be reviewed by a lawyer".

Step 10 · Check everything

COPY INTO CLAUDE CODE

Log in as each role using example accounts (Head, sub-staff, influencer, Spotted head, Spotted staff) and confirm: each sees only what it should, money is hidden from staff, influencer money shows as ranges, the Excel and PDF downloads open, and switched-off sections are hidden. List anything you fixed.

Then do it yourself: open **/demo** on your phone and an iPad (or a big phone held sideways) and tap through.

Honest checks

- **Timing:** none of this is needed before restaurants join. Build the **/demo** version only when you start pitching. **The app and store launch come first.**
- **"Recommended item bought"** is only as good as the staff tick. Keep it to one yes/no tap so they actually do it.
- **Influencer ranges:** a small restaurant with one influencer could still guess. Hide the range when fewer than 5 visits that period.
- **Shop staff limits** (3 / 5 / unlimited) are my guess. Confirm before pitching shops.
